# Compensation and Benefits Study 

Final Report

## Letter from the Presidents

On behalf of the Association of Professional Geoscientists of Nova Scotia, the Association of Professional Geoscientists of Ontario, and the Ordre des géologues du Québec, we are pleased to provide this Compensation and Benefits Study of our collective memberships.

Our three associations worked collaboratively to gather, analyse and present this snapshot of the geoscience profession in Eastern Canada. This study is an update from the 2013 survey.

This project was an opportunity for our three Associations to work closely together to create a product that is valued by our memberships. We thank those members in our associations who participated in the survey and shared their information that when aggregated gave us data that benefits all members.

We trust you will find this information relevant and useful.
Regards,

Paul Bateson, P.Geo., President, APGNS

Mark Priddle, P.Geo., President, APGO

Robert Wares, P.Geo., D.Sc., President OGQ

## Overview

The Compensation and Benefits Study is designed to provide geoscientists in Nova Scotia, Ontario and Québec with industry standard guidelines for compensation and benefits available to them. The results can be used for negotiating employment contracts, considering the costs and benefits of additional education or training or looking towards a change in job status.

The report is also a reference for students who are considering geoscience as a career and human resource departments as they determine policies and practices.

Compensation and benefit averages and ranges as well as other data are based on survey responses and are only as accurate as the data provided by those survey respondents. The response rate of $34 \%$ and margin of error $1.97 \%$ put this study at the high end of studies of this type.

The overall results can be interpreted with confidence. However, since compensation levels vary significantly with the demographic characteristics of the respondents and the organizational profiles of their employers, these factors should be taken into consideration when using this study as a resource for compensation planning. As well, results for sub-groups (e.g. based on respondent profile and work setting) should be interpreted with caution when the sample sizes are smaller.

## HOW TO USE SURVEY RESULTS

To use salary survey data as a guideline it is important to consider all reported results and to keep in mind the following remuneration concepts.

- Income is affected by multiple factors such as seniority, education, level of responsibility (managerial or technical) or hardship conditions. (The Job Rating Flowchart on the next page should be used to estimate your "Job Rating" and the results reported in the tables in this summary should be closely noted).
- Salary levels vary among industry sectors.
- Total cash by year of graduation should only be used as a check on career progress relative to others of an equivalent age. Employers and members consistently want and use this information as a check on the more basic level-of-responsibility concept.
